

## The 4th Andalas International Nursing Conference. Facing Global Health Challenges: Health Professional Roles, Responsibilities, and Contributions

Currently, global health problems are still a significant challenge to achieving sustainable development targets. The world is still facing high maternal and child mortality rates; AIDS epidemic, tuberculosis, malaria, and neglected diseases; NCDs due to unhealthy; and disease pandemics. This can impact the high value of economic losses, mental health problems, and mortalities if a global pandemic reoccured. Thus, global anticipatory must be continuously fought for. We look forward to reconnecting with everyone in the health sector to discuss their latest experiences for handling global health issues.
